

Edinburgh – September 22<sup>nd</sup>, 2014

## EWT INSTALLS 100<sup>TH</sup> UK TURBINE

Today, EWT has successfully installed its 100<sup>th</sup> 500kW turbine in the UK market at Furrowland's site in Newton-On-Trent. This event underlines EWT's leadership position in the UK's distributed wind energy market.

Furrowland Ltd. is a family run agricultural business which specialises in vegetable storage and poultry production and is located 10 miles west of the historic city of Lincoln, on the Lincolnshire-Nottinghamshire border.

The *DIRECTWIND*54-500kW turbine is directly connected to the farm's private electrical network in order to reduce the owner's reliance on electricity from the national grid and to offset his current energy costs. The electricity produced by the turbine is used to power 20.000 tonnes of chill storage (at 1 degree Celsius) and poultry sheds for over 100 acres of organic free range chickens.

Mark Jones, CEO of EWT, adds "the installation of our 100<sup>th</sup> UK turbine is a tribute not only to EWT's technology and its market leading service teams, but also to the foresight and support of its customers both in the UK and worldwide who consider EWT a best in class solution to self generation and the offset of high conventional electricity costs".

### About EWT

EWT is a leading wind turbine supplier for distributed wind energy applications. With turbines generating electricity for customers from Alaska, mainland US, across Europe and through to Asia, EWT represents the technology of choice for many parts of the distributed wind energy sector. EWT offers a highly efficient product range based on direct drive technology with a high yield, low cost of energy and high quality availability levels. The company focuses on offering cost-effective energy solutions to heavy energy users, ranging from turbine supply to full energy provision.
